6. I am a patriotic soldier with a stars and stripes shield. Who am I? _____

7. I am the owner of Stark Industries. Who am I? _____

8. I am the king of seven seas. Who am I? _____

Wonder Woman

Aquaman

Captain America

Iron Man

Superman

Black Widow

Wolverine

Hulk

TO DO → A table for birds

Materials needed:

An old plastic tray and two pieces of nylon or any other strong rope, each 60 cm long

To do:

1. Ask an adult to make a hole in each corner of the tray. Also, make about six more holes along one edge of the tray for rainwater to drain out.

2. Take a piece of rope. Slide each end of the rope through two opposite holes. Tie big knots at the ends of the rope to fix it to the tray. The knots should be on the outer side of the tray. Do the same with the other piece of rope at the other end of the tray.

3. Ask an adult to hang the tray on a branch, low enough for you to reach it. Every morning, sprinkle some grains, nuts, pieces of fruit, and seeds on the tray, and see how birds enjoy their meal. Don't forget to keep a bowl of water.

4. Keep the tray clean. Help birds to build their nests by hanging a net bag full of twigs, scraps of cotton, and bits of wool on the branch.

The Energy Saver

Save energy—be a winner! Find out who conserves energy best!

1. In winters, sit in the Sun to warm yourself. You must try to avoid using electric heaters as they consume a lot of electricity. The Sun can also give you the same warmth.

2. Chargers continue to draw electricity when they are plugged in. You can save electricity by unplugging your phones after they are completely charged.

3. Electrical bulbs such as LEDs and CFLs use up less electricity as compared to regular bulbs. Use more LEDs to save electricity.

4. Electric gadgets use electricity that is generated using valuable natural resources such as coal and water. You can save these resources by switching off the lights, fans, and other electrical devices, like the television, when you leave the room.

5. Shut down your computer when you are not using it. In On mode, your computer continues to use electric power even when it is not in use.

6. As far as possible, use a solar cooker for cooking food. Solar cookers get their energy from the sun. Furthermore, solar energy is clean energy, because it doesn't give out any harmful by-products, like smoke or ash.

7. You should walk as much as you can. It will not only keep you healthy but also help to save natural fuels that most cars use, like petrol and CNG.

8. You should wear warm, woollen clothes in winters to protect yourself from the cold weather. It is advisable to wear multiple layers of clothes instead of one warm dress as the layers trap heat and help to keep your body warm.

9. Begin by taking small steps that lead to a big difference in the conservation of natural resources. Spread ideas among your family, friends, and relatives about the different ways of energy conservation.

10. Walk to your school or places that are not very far. You can take a bus to go to school. In this way, you can save fuel.
