Topic: Subtraction

Properties Of Subtraction

In subtraction, the order of numbers is very important. The bigger number has to be on the top.

Zero has no value. So, when we subtract zero from any number, the answer is the number itself.

Can you subtract 3268 from 1236? No, you can't because subtraction of a greater number from a smaller number is not possible.

Subtract this:

$$\begin{array}{r} 1236 \\ - 3268 \\ \hline \end{array}$$

Not possible

Now, subtract this

$$\begin{array}{r} 3268 \\ - 1236 \\ \hline \end{array}$$

2032

Subtract 0 from 1654.

$$\begin{array}{r} 1654 \\ - 0 \\ \hline \end{array}$$

1654

EXERCISE 3 (C)

1. Fill in the blanks.

(a) $5296 - 5296 = \square$

(b) $3752 - 0 = \square$

(c) $\square - 6459 = 0$

(d) $2750 - \square = 2750$

(e) $356 - 0 = \square$

2. State True or False.

(a) The value of $256 - 100$ is same as $100 - 256$.

(b) Subtracting zero from any number, the answer is the number itself.

(c) On subtracting 256 from 256, we get 1.

(d) The difference of $253 - 700$ is possible.

(e) On changing the order of numbers in subtraction, there is no change in result.

(f) As addition means 'adding', subtraction means 'taking away'.
