

Let's Learn Assignment-4

Red, Yellow, Blue — Primary colours.
 Green, Orange, Violet — Secondary colours.
 A primary colour + its adjoining secondary colour = Tertiary colour

In a colour wheel the opposite colours are called complementary colours. They go well together.

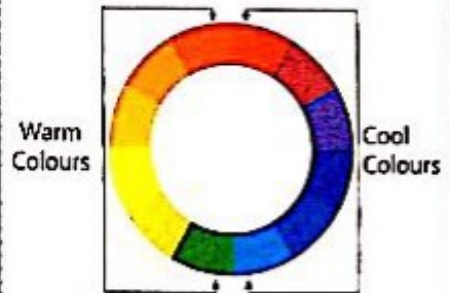

Warm and cool colours

The colour circle can be divided into warm and cool colours.

Warm colours are vivid and energetic, and tend to advance in space.

Cool colours give an impression of calmness, and create a soothing impression.

White, black and grey are considered to be neutral.
