- a) cheetah                                      b) human being                                      c) antelope

12. Which of these birds can rotate its neck 270 degrees?

- a) owl                                      b) toucan                                      c) kite

### Titbits

The Arctic tern migrates from its summer ground in the Arctic to its winter ground in the Antarctic, travelling around 60,000 km to 82,000 km every year. This is the longest annual animal migration in the world.

Do birds use GPS to navigate? How else do they know exactly which route to take every year when they migrate?
